# KEYSTONE KEYLifters

Designed for lifting and placing Keystone Compac and Standard units with ease, the Keystone KeyLifter allows two people to easily carry and set a unit by sharing it's weight between them. Simply place a KeyLifter into the paired pin holes on either side of the unit and lift. The unique, upward handle design permits the unit to be placed into the wall without injury to hands or fingers. Once the unit is set in place, the KeyLifters can be easily removed from the pin holes for use on the next unit.

AVAILABLE FOR  
SERIES I & II

KEYLifters

EQUIPMENT

The Keystone KeyLifters make installing Keystone Standard and Compac units easier for your crew. Available for both Series I & II, KeyLifters are especially convenient for laying the base course for your wall without disrupting the prepared leveling pad.

(KL02) Series I - Inline pin holes

(KL03) Series II - Angled pin holes

Be sure to specify unit style/series to be installed when ordering KeyLifters due to different tool head angle requirements. Angled pins (KL03) are necessary for Series II or inline pins (KL02) for Series I.

#### BENEFITS:

- Allows two crew members to share the load of a Keystone Standard or Compac unit
- Eliminates injury to hands and fingers when trying to set two units close together
- Reduces disruption of the prepared leveling pad when laying the base course
- KeyLifter handle grips assure a firm grasp on the unit

#### INSTRUCTIONS:

- Make sure pin holes in unit are free of any concrete crumbs or core fill material.
- Place the steel pins on each KeyLifter into the pin holes on either side of the unit.
- Using one crew member on either side of the unit, lift the unit using the KeyLifter handles.
- Lower the unit into place and release the KeyLifter tools.
- Adjust units to final position as required.
